

TECHNICAL CATALOG & SELECTION GUIDE

PostgreSQL Tools

2026 Validated Catalog of 60+ Tools, Services, Extensions, and Drivers

PostgreSQL baseline: 18.6 | Tool status reviewed September 2026

Original article credit “60+ Top PostgreSQL Tools” by Stefan Thorpe, published December 19, 2020 on LinkedIn and originally published on Cherre.com. **This catalog retains the full source list, adds 2026 status guidance, and gives full credit to the original owner.**

Document Control

Field	Value
Document type	Technical Catalog and Selection Guide
Original article author	Stefan Thorpe
Original publication	Cherre.com / LinkedIn — 2020
PostgreSQL baseline	18.6
Catalog review date	September 2026
Scope	66 source entries across GUIs, utilities, services, HA, backup, monitoring, drivers, extensions, BI, clustering, and optimization

Source and Accuracy Statement

The source article listed 66 entries even though its title says 60+. This guide preserves every entry but does not recommend each one. Tool descriptions and names age faster than PostgreSQL documentation. “Active/current” means an official project/product presence was found during review; it does not guarantee compatibility, support, security, licensing, or suitability for a specific environment. “Legacy/verify” requires fresh evidence before any deployment.

Selection rule Never install a PostgreSQL extension, agent, driver, failover manager, or backup utility only because it appears in a list. Validate release activity, PostgreSQL 18 compatibility, license, CVEs, privileges, data access, architecture, support, upgrade behavior, rollback, and restore/failover testing.

1. Executive Summary

Finding	2026 interpretation
The article contains 66 entries	There are 66 category entries; PostgreSQL Dashboard appears twice under different labeling, so the unique count is lower.
Many core choices remain strong	pgAdmin, DBeaver, DataGrip, PostGIS, postgres_fdw, Barman, pgBadger, PoWA, pgcli, mainstream drivers, HypoPG, TimescaleDB, and major managed services remain relevant.
Some descriptions are materially wrong	pgBouncer is a connection pooler—not an authorization firewall; PostGIS adds rich spatial capabilities beyond core types; PGHero has long been public.
Several entries are legacy or renamed	Chartio closed; GridSQL/OpenFTS are historical; Swarm64 changed ownership; Hyperscale Citus branding changed; some repositories show limited activity.
Managed service claims need contracts	Backups, HA, versions, extensions, networking, RPO/RTO, maintenance, and pricing differ by provider and tier.
Tools are not substitutes for PostgreSQL fundamentals	Use pg_stat views, EXPLAIN, WAL/backup principles, VACUUM, security, and tested recovery as the baseline.

2. How to Use This Catalog

Status phrase	Meaning
Active/current	Official project/product presence and current relevance observed; still validate exact release.
Commercial/current	Current commercial product/service; validate plan, region, support, data handling, and cost.
Built-in/contrib	Provided by PostgreSQL core or official contrib packaging; availability/privileges may vary on managed services.
Renamed/evolved	Original name or market positioning changed; use current product documentation.

Status phrase	Meaning
Legacy/verify	May be dormant, archived, superseded, acquired, or unsuitable for PostgreSQL 18 without evidence.
Duplicate/source overlap	Same or materially overlapping entry appears elsewhere in the source list.

1. Start with the operational problem, not a product name.
2. Prefer built-in PostgreSQL evidence and standard tools before adding agents/extensions.
3. Create a shortlist of two or three options.
4. Verify support for PostgreSQL 18.6 and exact operating platform/service.
5. Threat-model credentials, network access, telemetry, and extension privileges.
6. Test installation, upgrade, failover/restore, performance overhead, and removal.
7. Document owner, support path, renewal, backup of configuration, and rollback.

3. GUI, Reporting, and Documentation

Tool / service	Primary use	2026 review position
DataGrip	Cross-database IDE and SQL development.	Commercial/current. Strong editor; not a replacement for monitoring, backup, or HA.
DBever	Cross-platform database administration and SQL.	Active/current; Community and commercial editions. Review driver and credential storage.
Navicat for PostgreSQL	Commercial PostgreSQL GUI and data tools.	Commercial/current; validate feature tier and secure export/credential handling.
pgAdmin 4	PostgreSQL-focused administration GUI.	Active/current and PostgreSQL project ecosystem. Server mode requires web/security hardening.
Valentina Studio	Multi-database GUI, reporting, modeling.	Commercial/current; verify PostgreSQL driver/version features.
phpPgAdmin	Web administration interface.	Legacy/verify. Review maintenance, PHP stack, authentication, and exposure before use.

Tool / service	Primary use	2026 review position
Metabase	BI/query and visualization platform.	Active/current; use read-only roles, query controls, and separate analytics capacity.
Slemma	Cloud BI/reporting.	Commercial/verify current ownership, availability, contract, and connector support.
Windward Studios	Document/report generation from data.	Commercial/evolved branding. Treat as reporting, not PostgreSQL administration.
agileBase	Low-code application platform using PostgreSQL.	Commercial/verify; not a general DBA tool.
Dataedo	Data catalog, lineage, documentation.	Commercial/current; control metadata collection and sensitive-data discovery.
DB Doc for PostgreSQL	Schema documentation generator.	Commercial/verify; test PostgreSQL 18 object coverage.
Chartio	BI dashboard platform.	Legacy/discontinued after Atlassian acquisition; do not start new adoption.
SeekTable	Ad-hoc reporting and pivot/BI.	Commercial/current presence; use least-privilege reporting users.
Ubiq	Web reporting/BI.	Commercial/verify current product and support before adoption.

4. Core Utilities and Extensions

Tool / service	Primary use	2026 review position
pg_catcheck	System-catalog consistency checks.	Open source/verify exact PostgreSQL release and EDB guidance; run from tested binaries.
pgBouncer	Lightweight connection pooler.	Active/current. It manages pooling; PostgreSQL authentication/authorization still controls access.

Tool / service	Primary use	2026 review position
HypoPG	Hypothetical indexes for planner experiments.	Active/current extension. No physical index data; estimates remain hypothetical.
PostGIS	Geospatial types, functions, and indexes.	Active/current. PostgreSQL has basic geometric types, but PostGIS provides the major GIS stack.
postgres_fdw	Access PostgreSQL servers as foreign tables.	Built-in contrib extension. Not transparent replication; plan, transaction, latency, and pushdown limits apply.
Citus	Distributed PostgreSQL extension.	Active/current open-source/commercial ecosystem; architecture and feature limits require design review.
pg_stat_statements	Query planning/execution statistics.	Official contrib baseline for workload evidence; requires preload and query-ID configuration.
auto_explain	Automatic logging of slow plans.	Official contrib; sampling/log volume and sensitive values require controls.
pg_repack	Online-style table/index reorganization.	Popular external extension; validate PostgreSQL 18 build, privileges, disk, locks, and replica/WAL impact.
pg_cron	Database job scheduling.	External extension, often managed-service supported. Review privileges, timezone, failover behavior, and duplicate execution.

5. Managed PostgreSQL Services

Tool / service	Primary use	2026 review position
----------------	-------------	----------------------

Tool / service	Primary use	2026 review position
Amazon RDS for PostgreSQL	AWS managed PostgreSQL.	Commercial/current. Provider manages infrastructure tasks, not schema/query design, access, cost, or complete DR responsibility.
Aiven for PostgreSQL	Multi-cloud managed PostgreSQL.	Commercial/current; official site advertises PostgreSQL 18.6. Validate SLA, regions, extensions, and egress.
Google Cloud SQL for PostgreSQL	Google Cloud managed PostgreSQL.	Commercial/current. Validate flags, extensions, HA/PITR, maintenance, and limits by version/tier.
Azure Database for PostgreSQL	Microsoft managed PostgreSQL.	Current product is Flexible Server; older Single Server is retired. Validate extensions, HA, networking, and version policy.
DigitalOcean Managed PostgreSQL	Developer-focused managed PostgreSQL.	Commercial/current. Old fixed price in source is obsolete; verify current plans and HA/backup behavior.
Heroku Postgres	Heroku managed PostgreSQL.	Commercial/current. Plan names/features differ from 2020; verify durability, HA, PITR, network, and migration tier.
Managed-service principle	Shared responsibility boundary.	Provider automation does not remove customer ownership of logical backup, restore tests, security, schema, queries, capacity, and cost.

6. HA, Clustering, and Distributed SQL

Tool / service	Primary use	2026 review position
PostgreSQL Dashboard / BGR	Live monitoring dashboard.	Source labels BGR and later PostgreSQL Dashboard appear to refer to the same project; monitoring is not automatic failover.

Tool / service	Primary use	2026 review position
Stolon	Cloud-native PostgreSQL HA manager.	Legacy/verify repository maintenance and supported Kubernetes/PostgreSQL versions before adoption.
PAF	Pacemaker resource agent for PostgreSQL.	Open source/verify current ClusterLabs support matrix. Pacemaker design and fencing expertise are mandatory.
Postgres-XL	Shared-nothing distributed PostgreSQL-derived system.	Legacy/verify; do not assume compatibility with current community PostgreSQL.
AgensGraph	Multi-model graph database based on PostgreSQL.	Product/evolved; it is not a generic cluster manager. Validate vendor release and PostgreSQL base.
YugabyteDB	Distributed SQL with PostgreSQL-compatible YSQL API.	Active/current separate database product; compatibility is not identical PostgreSQL.
GridSQL	Historical distributed query/database project.	Legacy/dormant. Not a modern production recommendation.
Hyperscale (Citus)	Former Azure distributed PostgreSQL branding.	Renamed/evolved. Review current Citus and Microsoft distributed PostgreSQL offerings; do not use old product claims.
Patroni	PostgreSQL HA orchestration.	Not in 2020 source list but a leading current option; requires DCS, proxy/routing, fencing/operations design.
repmgr	Replication and failover management.	Not in source list; active PostgreSQL ecosystem option. Validate witness, fencing, routing, and split-brain controls.

7. Backup and Recovery Tools

Tool / service	Primary use	2026 review position
----------------	-------------	----------------------

Tool / service	Primary use	2026 review position
Barman	Remote backup catalog, WAL archiving/streaming, recovery.	Active/current; 2026 releases support modern cloud workflows. Restore/PITR testing remains mandatory.
pg_probackup	Physical backup/recovery manager.	Active/current project reports PG13–18 support, but PG18 build notes require special review. Test exact distribution.
pgBackRest	Physical backup, repositories, WAL archive, restore.	Not in source list; leading current production choice. Validate version, repo design, encryption, retention, and restore.
pg_basebackup	Physical base backup utility.	PostgreSQL core. Suitable building block; requires WAL/retention/recovery design.
pg_dump / pg_restore	Logical backup and object-level migration.	PostgreSQL core; not a physical PITR substitute. Use matching/newer client and test restores.
Backup principle	A successful backup command is not proof of recovery.	Measure RPO/RTO through scheduled restore, PITR, corruption, and failover exercises.

8. Monitoring and Optimization

Tool / service	Primary use	2026 review position
Dat sentinel	PostgreSQL monitoring and SQL/session analytics.	Commercial/current presence; validate collection privileges, retention, overhead, and support.
PostgreSQL Dashboard	Lightweight live activity dashboard.	Open-source/current catalog presence; limited depth. Duplicate/overlap with BGR source entry.

Tool / service	Primary use	2026 review position
pgBadger	PostgreSQL log analyzer and reports.	Active/current. Requires correct log_line_prefix and logging; protect sensitive SQL.
pgCluu	Cluster/database/system performance reports.	Open-source/current ecosystem presence; verify OS collectors and PostgreSQL 18 fields.
Postgrestats	Lightweight statistics UI.	Legacy/verify project availability, release activity, and security.
PoWA	PostgreSQL workload analyzer.	Active/current ecosystem; relies on several extensions and a repository/UI architecture.
check_postgres	Nagios/Icinga-style checks.	Active/current ecosystem. Define actionable thresholds and secure monitoring credentials.
PGHero	Database health/performance dashboard.	Active/public open-source project; source claim that it was not public is outdated.
pgDash	PostgreSQL monitoring SaaS/self-hosted.	Commercial/current; uses pgmetrics ecosystem. Validate data egress and agent privileges.
PGTune	Configuration suggestion calculator.	Active/current aid, not an auto-tuner. Output is a starting hypothesis.
PGMustard	EXPLAIN plan analysis/education.	Commercial/current. Redact sensitive plans and verify data-handling policy.
PGConfig	Configuration suggestion calculator.	Current/verify. Use as a starting point, then benchmark and monitor.
pgmetrics	Single-binary stats collection/reporting.	Active/current ecosystem. Useful for evidence and automation; validate fields by PG version.

Tool / service	Primary use	2026 review position
Prometheus + postgres_exporter	Metrics collection and alerting.	Not in source list; common current stack. Curate queries, cardinality, permissions, and alerts.
Grafana	Visualization and alerting.	Not PostgreSQL-specific; commonly paired with metrics sources. Dashboards do not replace tested runbooks.

9. CLI and Developer Drivers

Tool / service	Primary use	2026 review position
pgcli	Interactive PostgreSQL CLI with completion.	Active/current. psql remains the official reference client for administrative scripts.
pgsh	Shell/migration-oriented project.	Legacy/verify maintenance and security before use.
psql	Official PostgreSQL interactive terminal.	Core/current; best portability for SQL administration and scripted validation.
ruby-pg	Ruby PostgreSQL driver.	Active/current; validate Ruby/libpq/PostgreSQL support matrix.
pgJDBC	Java JDBC driver.	Active/current official driver project; review TLS, prepared statements, pooling, and failover settings.
pgx	Go driver/toolkit.	Active/current; distinguish pgx native APIs from database/sql compatibility.
Npgsql	.NET data provider.	Active/current; supports modern .NET. Source spelling “Npsql” is incorrect.
node-postgres	Node.js PostgreSQL client.	Active/current; manage pools, timeouts, TLS, and parameterized SQL.

Tool / service	Primary use	2026 review position
rust-postgres / tokio-postgres	Rust synchronous/asynchronous clients.	Active/current ecosystem; validate runtime/TLS features.
Psycopg	Python PostgreSQL adapter.	Active/current; Psycopg 3 is modern. psycopg2 remains widely used but is not the only recommendation.
Driver principle	Application connectivity and protocol support.	A driver is not a proxy, HA manager, ORM, or security boundary; configure pooling, TLS, retries, and timeouts.

10. Specialist Extensions

Tool / service	Primary use	2026 review position
OpenFTS	Historical external full-text search.	Legacy. PostgreSQL has built-in full-text search; evaluate current search needs/tools.
AppOS	Storage/framework extension/product.	Legacy/verify ownership, source availability, support, and compatibility.
PostPic	In-database image type and processing.	Listed in PostgreSQL software catalog; verify project activity, dependencies, and PG18 build.
Swarm64	PostgreSQL acceleration technology.	Legacy/evolved after acquisition; do not rely on 2020 product claims.
CyanAudit	DML audit extension in PL/pgSQL.	PGXN project/verify maintenance and overhead; compare pgaudit and native logging.
TimescaleDB	Time-series extension/platform.	Active/current. Review license/features, supported PG versions, extension upgrades, and managed options.

Tool / service	Primary use	2026 review position
prefix	Prefix-range type and GiST indexing.	PostgreSQL software-catalog extension; specialized use. Validate PG18 packaging.
PG-Strom	GPU/NVMe acceleration extension.	Active specialist project/verify hardware, build, PG18 support, planner behavior, and licensing.
PG-Themis	Encryption functions using Themis.	Legacy/verify maintenance and cryptographic review; application/KMS design may be preferable.
pgaudit	Detailed session/object audit logging.	Not in source list; widely used current extension. Configure scope/log volume and protect logs.
pgvector	Vector similarity search extension.	Not in source list; major current option. Validate index types, dimensions, memory, recall, and provider support.

11. Current-State Corrections

Source statement	2026 correction
62 tools are listed.	The supplied article contains 66 category entries; PostgreSQL Dashboard is duplicated/overlapped.
Postgres has no native GUI.	Core server still has no desktop GUI, but pgAdmin is the PostgreSQL project's primary GUI ecosystem tool.
pgBouncer prevents unauthorized access.	It is a connection pooler. Authentication can be integrated, but authorization remains PostgreSQL role/privilege policy.
HypoPG indexes consume no cloud resources.	They avoid physical index build/storage but still use extension/session memory and planner work.
PostGIS fills a total lack of spatial support.	PostgreSQL has basic geometric types; PostGIS provides comprehensive GIS types/functions/indexing.

Source statement	2026 correction
Managed services let you forget availability/backups.	They automate defined layers; customers retain shared responsibility and must test restore/HA and manage data/schema/security/cost.
PAF needs one configuration and HA is immediate.	Production Pacemaker HA requires fencing, quorum, routing, monitoring, failure testing, and operations ownership.
Barman supports “rollbacks.”	It provides backup/recovery and PITR; this is not transaction rollback.
PGHero was not public.	It is a public open-source project.
PGTune makes the server optimal.	It generates starting recommendations; workload testing and observation decide settings.
Psycopg2 is the single Python recommendation.	Psycopg 3 is the modern generation; psycopg2 remains common.
Hyperscale Citus is the current Azure name.	Branding and Microsoft service offerings evolved; consult current Citus/Microsoft documentation.
Chartio is a current BI option.	Chartio was discontinued; migrate to a supported BI platform.
Postgres-XL/GridSQL are recommended cluster choices.	Treat them as legacy/verify; use current supported architecture and compatibility evidence.
Every listed extension is safe to install.	Extensions run inside or close to the database trust boundary; source, build, privileges, CVEs, and upgrade support must be reviewed.

12. Selection Matrices

12.1 Choose by requirement

Requirement	Shortlist	Decision factors
-------------	-----------	------------------

Requirement	Shortlist	Decision factors
General PostgreSQL GUI	pgAdmin, DBeaver, DataGrip	PostgreSQL depth, licensing, platform, credential policy, team workflow.
Connection pooling	pgBouncer	Session vs transaction mode, prepared statements, auth, failover/routing, observability.
Query evidence	pg_stat_statements, auto_explain, pgBadger	Preload/restart, log volume, privacy, retention, overhead.
Monitoring platform	Prometheus/Grafana, PoWA, pgDash, PGHero	Agent/extension model, HA coverage, alerts, retention, SaaS egress, cost.
Physical backup/PITR	pgBackRest, Barman, pg_probackup	Repositories, cloud, incremental features, encryption, support, restore RTO.
Logical backup/migration	pg_dump/pg_restore	Version direction, size/downtime, roles/ACLs, large objects, restore parallelism.
HA orchestration	Patroni, repmgr, PAF	Platform/DCS, fencing, routing, sync policy, split-brain controls, team skills.
Geospatial	PostGIS	Data model, SRID, index/operator semantics, extension/provider support.
Time series	TimescaleDB or native partitioning	License, features, portability, compression/retention, operational model.
Vector search	pgvector	Scale, index/recall, embedding lifecycle, memory, service support.

Requirement	Shortlist	Decision factors
Managed PostgreSQL	RDS, Cloud SQL, Azure Flexible, Aiven, DO, Heroku	Versions, extensions, HA/PITR, networking, observability, regions, egress, support, cost.

12.2 Build versus buy

Model	Advantages	Trade-offs
Self-managed open source	Control, portability, transparent source, custom integration.	Team ownership for patches, HA, backups, monitoring, on-call, and capacity.
Commercial self-hosted	Support and enterprise features while retaining infrastructure control.	License cost, upgrade/vendor dependencies, integration complexity.
Managed service	Automated provisioning/patching/backups/HA within service contract.	Feature/extension limits, cloud coupling, egress, maintenance policy, shared responsibility.
SaaS monitoring/BI	Fast onboarding and managed UI/retention.	Credential/data egress, compliance, recurring cost, service dependency.

13. Security and Production Validation

- ☐ Use only official repositories, signed packages, pinned versions, and software-bill-of-material evidence.
- ☐ Check last release/commit, maintainers, issues, security policy, CVEs, license, and end-of-life notices.
- ☐ Verify PostgreSQL 18.6 compatibility plus OS, CPU architecture, libc, OpenSSL, Python/Java/.NET runtime, and managed-service support.
- ☐ Document required superuser, CREATE EXTENSION, shared_preload_libraries, background workers, filesystem, network, and cloud IAM privileges.
- ☐ Create dedicated least-privilege service roles; never reuse application owner/superuser credentials.

- ☐ Encrypt transport, protect secrets, restrict egress, and define telemetry/query-text redaction.
- ☐ Benchmark CPU, memory, WAL, I/O, locks, query latency, connection use, and replication lag.
- ☐ Test backup/restore and HA tools through real recovery/failover/failback exercises.
- ☐ Test upgrade and uninstall/rollback; preserve configuration and collected evidence.
- ☐ Approve ownership, support escalation, renewal, monitoring, and end-of-life replacement plan.

Extension trust boundary A PostgreSQL C extension can execute inside server processes. A defect or malicious build can crash or compromise the instance. Treat extension approval like database-server software approval, not like adding a harmless client utility.

14. Operational Scripts

14.1 Installed extensions and versions

```
SELECT e.extname, e.extversion, n.nspname AS schema,
       e.extrelocatable
FROM pg_extension e
JOIN pg_namespace n ON n.oid=e.extnamespace
ORDER BY e.extname;

SELECT name, default_version, installed_version, comment
FROM pg_available_extensions
ORDER BY name;
```

14.2 Preloaded libraries and worker capacity

```
SELECT name, setting, source, pending_restart
FROM pg_settings
WHERE name IN ('shared_preload_libraries','session_preload_libraries',
              'local_preload_libraries','max_worker_processes',
              'max_parallel_workers','max_wal_senders')
ORDER BY name;

SELECT backend_type, count(*)
FROM pg_stat_activity
GROUP BY backend_type ORDER BY backend_type;
```

14.3 Monitoring-role inventory

```
SELECT r.rolname,
       pg_has_role(r.oid,'pg_monitor','member') AS has_pg_monitor,
       pg_has_role(r.oid,'pg_read_all_stats','member') AS reads_all_stats,
```

```
r.rolsuper, r.rolcanlogin
FROM pg_roles r
WHERE r.rolcanlogin
ORDER BY r.rolname;
```

14.4 Core evidence before adding a tool

```
SELECT version();
SELECT * FROM pg_stat_checkpoint;
SELECT * FROM pg_stat_wal;
SELECT backend_type, object, context, reads, read_bytes,
       writes, write_bytes, read_time, write_time
FROM pg_stat_io
ORDER BY backend_type, object, context;

SELECT extname, extversion
FROM pg_extension WHERE extname='pg_stat_statements';
```

14.5 Generate extension update review commands

```
SELECT format('ALTER EXTENSION %I UPDATE;', extname) AS candidate_command,
       extversion AS installed_version
FROM pg_extension
WHERE extname <> 'plpgsql'
ORDER BY extname;
```

Do not execute generated updates blindly Extension upgrades can run SQL/C migration code, require locks, change data formats, and affect replicas/backups. Read release notes, back up, test exact upgrade paths, and execute one approved extension at a time.

15. Troubleshooting and Rollback

Failure	Diagnosis	Rollback/recovery direction
Server fails after preload change	PostgreSQL logs, library path/dependencies, version/ABI.	Restore prior config/package; restart under approved procedure.
Extension update fails	Transaction state, extension dependency, locks, release migration.	Follow project-supported rollback; often restore or upgrade-forward—not ad-hoc catalog edits.

Failure	Diagnosis	Rollback/recovery direction
Monitoring causes load	Query frequency, cardinality, log volume, agent CPU/I/O.	Disable/scope collector; retain evidence; tune interval/queries.
Pooler breaks session behavior	Pooling mode, prepared statements, temp/session settings, LISTEN.	Return affected app to session/direct connection; redesign compatibility.
HA false failover/split brain	DCS/quorum/fencing, timeline, routing, logs.	Fence first; identify authoritative primary; follow tested rejoin/rebuild runbook.
Backup tool reports success but restore fails	Catalog, WAL continuity, keys, permissions, version, target.	Escalate; use alternate verified backup; fix and retest full chain.
Driver upgrade changes behavior	Release notes, protocol/TLS, type mapping, pool/timeouts.	Pin prior supported driver; regression test before retry.
Managed-service migration blocked	Extensions, roles, unsupported flags, network, version.	Keep source authoritative; reverse cutover per plan; resolve compatibility.
Tool discontinued	Vendor notice, export APIs, config/data retention.	Export data/config; replace with supported option; remove credentials/agents safely.

16. Production Checklist

- ☐ Problem statement, success metric, owner, budget, and support model documented.
- ☐ Source-list item checked for current name, URL, releases, license, and maintenance status.
- ☐ PostgreSQL 18.6/OS/service compatibility confirmed by official project documentation.
- ☐ Privileges, credentials, network paths, telemetry, and sensitive-data flow threat-modeled.
- ☐ Nonproduction installation, workload overhead, upgrade, backup/restore or failover behavior tested.
- ☐ HA tools include quorum/fencing/routing and split-brain recovery—not only promotion.
- ☐ Backup tools pass scheduled restore and PITR tests with measured RPO/RTO.
- ☐ Monitoring alerts map to owned runbooks and avoid high-cardinality/noisy collection.

- ☐ Managed service responsibilities, SLA, maintenance, extensions, networking, regions, and cost documented.
- ☐ Rollback/uninstall and configuration/data export tested.
- ☐ Inventory includes version, host/database scope, owner, renewal/EOL date, and review cadence.
